Why the 360 Pet Turf Method?

A pet installation is unique. There is no doubt synthetic grass will beautify your home, but the most important aspect of this type of installation is the performance. Unlike many synthetic grass companies, 360 understands that pet urine can and will create unwanted odors that will turn your new synthetic lawn into an unpleasant experience. This is why it is important to make sure the urine does not bond with the turf backing. 360's Pet Turf has a specially formulated backing which repels urine and doesn't allow it to bond - leaving your turf smelling fresh & clean all the time!

The 360 Pet System utilizes a five step process to drastically curtail odor issues by focusing on aeration, drainage, neutralization and of course beauty. Each step of our system compliments the other to create the perfect combination for great looking and fresh smelling artificial grass. From our antibacterial Durafill, urine neutralizing ATD, UV stabilized pet turf and perforated drain core to our non-toxic turf fresh, this system was designed to meet the needs of pet owners.

Whether you have one small pet or a whole family of large animals... The 360 Pet Turf System is exactly what you need!

All of the products in our system have been tested and are safe not only for your pet, but also the environment and most importantly you.

IF YOUR PET IS PART OF THE FAMILY.... THEN YOU OWE THEM THE MOST ADVANCED SYNTHETIC TURF OUT THERE!"

PET TURF

- UV stabilized / heat & frost resistant
